REPORTING SOFTWARE

FLIR Thermal Studio™

FLIR Thermal Studio is state-of-the-art thermal image analysis and reporting software designed to manage thousands of thermal images as well as thermal video. Engineered for thermographers who use handheld cameras, unmanned aircraft systems (UAS), and optical gas imaging (OGI) cameras, FLIR Thermal Studio provides automation and advanced processing capabilities that will significantly streamline workflow and increase productivity. FLIR Thermal Studio automates report design and composition features to enable users to easily provide colleagues and customers with professional reports. Supportive of images and videos from many current FLIR thermal cameras, FLIR Thermal Studio is available in more than 20 languages as a standalone Windows application. This software makes thermal images as easy to edit as visual ones, enabling users to spend more time in the field and less time at their desks, processing images and videos.

COMPOSE ADVANCED REPORTS FASTER

Generate reports quickly—more than 100 pages in less than a minute—based on customizable templates

- Produce consistent, professional-looking reports without Microsoft Office that are tailored to customer needs
- Easily adjust Multi Spectral Dynamic Imaging (MSX®) and other visual light camera features
- Use advanced measurement functions, and perform coverage calculations, multi-source plots, and formula computations

STREAMLINE IMAGE EDITING Batch processing accelerates post-production and report generation

- Manage, edit, analyze, and report on thousands of thermal images gathered during surveys faster
- Pre-define a set of actions and apply those to any number of images or videos
- Select a thermal image and apply its properties across all images

ENHANCE THERMAL VIDEOS

Processing and usability advancements help users store, access, move, and edit large thermal video files

- Edit, identify, and select radiometric video segments that capture gas leaks in motion
- Select video segments and export in standard formats
- Use high-sensitivity mode and pixel binning in post-production to identify gas leaks that are difficult to see on video while in the field
