New model

SA type

Swing Arm

Vibration resistant

SWING ARM

Features of SA type

The SA type was developed in response to customer comments and requests that “spring-loaded arms are vulnerable to vibration” and “the footprint of the product needs to be smaller. Functionally, the SA type (swing type) satisfies the functions of the conventional ST type (long bar type) and can be used as a simple free arm. It is now possible to use the product in the customer's work environment with stability and peace of mind.

Operating range of arm section

MGL-SA

Dimensions of SA type

mm

MGL-SA

Weight : 2.2Kg (Arm only)
Clampable thickness : 15 ~ 45mm

Specification of “MGL-SA” as an example

Addition to the Well-received series!

LED illuminated magnifier

SKKL series

Basic model equipped with necessary and minimum functions

ENVL series

Standard model equipped with dimming function

MAGNALIGHT series

MAGNALIGHT series is the top-of-the-line model with round lenses. Dedicated machine for Magna wide lens with AR coating on Φ150 large aperture lens

OLIGHT5 series

Increasing lens area by 150%. Adopting BIG-RECTA-SYSTEM that standardized AR coat Flagship model with overwhelming field of view and contrast power

Full spectrum LED illuminated magnifier

ENVL6K series

Full spectrum, colour temperature 6000K LEDs.

OLED illuminated magnifier

OLIGHT6 series

The OLED lighting magnifier, which is said to be the next generation of lighting, has made its debut.

LED coaxial illuminated magnifier

Surflight series

Magnifiers are finally coming to coaxial illumination

LED illuminated loupe for checking holes, grooves, and inside walls

BoreLupe series

Capable of inspecting the inside of holes where light cannot reach
